QMAX[®]
Enduring Care

PREFACE

QMAX is new only by name not by legacy which is fostered with deep passion and commitment backed by 30+ years' experience of its promoters.

We take great pleasure to present the first edition of our products catalogue for Cranio-Maxillofacial (CMF) & Plastic surgery instruments. This edition brings and demonstrates most comprehensive range of surgical instruments required in CMF & Plastic surgery. The promoters have been striving hard since 1993 to achieve excellence in manufacturing quality products at affordable prices for Orthopaedics, Cranio-Maxillofacial, Neuro & Plastic Surgery fostering the spirit of "Make In India" to serve globally.

All our Instruments are approved by Indian FDA (CDSCO) under MD-5 License and manufactured under strict compliance of ISO 13485 standards which reflects our commitment and dedication towards the word "QUALITY & EFFICACY".

The internationally acclaimed use of raw materials, standardized forging – machining- special polish treatment- cleaning & packaging in most hygienic condition enriches our products to utmost "PERFECTION". We keep proper check and measure every little detail count in making every product fit for all critical surgical procedure. We aim at making our products most vital part of your surgery because we believe that the quality of the products helps to elevate all your surgical procedures to a whole new standard. We thank all our users and channel partners for their valuable feedback and suggestions for the continual improvement to achieve the highest parameters of product quality & safety.

All our products can be easily bought by contacting our nearest dealers or by simply sending your purchase enquiry to: contact@qmaxindia.in or Whatsapp : **+91 9429408861**

Please do visit our website to know more about us and products:

INSTRUCTIONS FOR USE (IFU)

STORAGE

All the surgical instruments should be stored in sterilizing trays of proper size lined with soft silicone mats. Instruments should not touch with each other. We recommend using protective tips made of soft silicone tubing of the proper size and thickness. Do not use rubber or plastic protective tips, which can melt during autoclaving and cause damage to instruments.

INTENDED USE

All the surgical instruments shall be used for its intended purpose only failing of which can lead to permanent damage or breakage of the instrument.

INSPECTION

Please handle the instruments with care and be sure to inspect every instrument at the end of your surgical day. Please conduct this inspection under a microscope or with magnification lens for fine instrument.

CLEANING

Manual Cleaning Procedure – All the new instruments must be decontaminated, lubricated and sterilized prior to each use. Use a mild soap solution approved for surgical instruments with a soft brush or instrument wipe to clean instrument and remove stains. Never use abrasive powders or steel wool to remove stubborn stains—these can damage the super fine finish of an instrument and can actually help cause corrosion of stainless instruments. Use distilled and treated water to rinse instruments thoroughly then carefully dry them with a hot air blower or lint-free cloth.

Ultrasonic Cleaning Procedure - This is the best method of cleaning surgical instruments. Use only cleaning solutions approved for surgical instruments. Change the solution frequently, always use treated or distilled water. Heat water to 150° Fahrenheit (65 °C) using an immersion heater, or in a separate stainless container, if your unit does not have an automatic built-in water heater. Be sure that you and your staff members are completely familiar with the manufacturer's instructions, which came with your ultrasonic cleaner. Instruments should never touch each other in the ultrasonic cleaner. After removing instruments from the ultrasonic cleaner, rinse the instruments under running water first, and then rinse again in clean demineralized water. Instruments should never be air dried in room temperature because this will cause corrosion on stainless instruments especially in knurled and laser engraved areas. This is why it is highly recommend using a hot air blower to thoroughly dry the instruments. Do not use acidic or alkaline solutions for cleaning because it removes the instruments' protective barrier of chromium oxide and can lead to corrosion, pitting or even breakage also.

CAUTION

Kindly keep all the instruments out of touch of following solutions: Aqua Regia- Iodine – Ferric Chloride – Sulfuric Acid – Hydrochloric Acid. Any kind of corrosion will lead to rust on steel and rust particles can be transferred from one instruments to other. Therefore any corroding instrument should be removed from service to prevent the formation of rust to other instruments

LUBRICATION

It is recommended to lubricate all moving parts after each cleaning. Use only silicone or Teflon lubricants which can hold up under autoclaving. Never use ordinary lubricants or cover up even the slightest corrosion with a lubricant.

STERILIZATION

Stainless Steel surgical instruments can be sterilized via steam autoclaving, chemical disinfectants, ethylene oxide gas, or even dry hot air. Gas and dry chemical sterilization are the best methods for stainless steel instruments, but they take a lengthy time period to accomplish the desired result. The most practical method of sterilization is heat or steam, which require less time. However, these methods can be damaging to delicate stainless steel instruments and instruments with Fiber or Teflon handles. Take care when sterilizing your instruments. And, once again, be sure that you and your staff have read and fully understood the instructions supplied by the manufacturer of your particular sterilizer. It is advisable to sterilize the instruments in the open position or disassembled because steam will only sterilize the surface where it can touch directly.

Above instructions are recommended to follow for better service life and durability of all instruments.
